Ref: 3661276168855

Bottle warmer Babymoov NutriSmart 2-in-1, car and home (black)

Babymoov NutriSmart 2-in-1 Portable Bottle Warmer, Home and Auto (black).

Heating bottles or jars of food to the right temperature in record time is a challenge that every new parent knows. The Nutrismart portable warmer is a solution that will make this process quick and hassle-free, whether at home or on the go. Simply enter the amount of milk or food and its temperature, and the device will automatically suggest the appropriate heating time. Suitable for all baby bottles, baby food jars or breast milk pouches (max 8 cm in diameter).

Perfect temperature in a flash

NutriSmart heats up baby bottles, breast milk sachets or baby food jars in no time using the most suitable heating method. The "bain-marie" function allows you to defrost jars of food or gently heat breast milk to a maximum temperature of 65°C, preserving all nutritional values. The steam heating function, on the other hand, allows you to instantly heat bottles and jars - it only takes 80 seconds to heat 65 ml of water.

Intuitive programming

With pre-programmed settings, NutriSmart automatically adjusts the heating time to reach the ideal temperature - 37°C. All you have to do is enter the amount of milk or food and its initial temperature (room temperature, chilled or frozen) and the device does the rest. This guarantees peace of mind for parents, who can be sure that their baby's food is always perfectly heated.

Versatility in any situation

NutriSmart is ideal both at home and on the go. With two plugs - one for home use and one for the car - you can take it anywhere. The included adapter will allow you to easily connect the device to your car's cigarette lighter to provide your baby with hot meals anywhere, anytime. Compact and easy to use, the warmer provides comfort and convenience in any situation.

Programmable functions

With programmable features, NutriSmart allows you to set a delayed start (from 15 minutes to 12 hours), perfect for night feedings or preparing a bottle for the morning. The automatic "keep warm" function keeps the contents of a bottle or jar at the ideal temperature of 37°C for 1 hour.

Included:

bottle warmer
car adapter
