TWS QCY HT05 Headphones, ANC (black)

Looking for headphones that will delight you with excellent noise cancellation and cut you off from external noises? The QCY HT05 will meet your expectations. The TWS headphones use ANC technology and reduce noise up to 40 dB, plus they have Wind noise cancellation, which will allow you to listen to podcasts and music on a windy day. Also noteworthy are 6 microphones and ENC, dynamic 10-millimeter drivers, as well as a long operating time of up to 30 h.

Forget the noise

What sets the HT05 apart from other headphones is its excellent ANC noise reduction, which can effectively reduce noise up to 40 dB. This means you can listen to music or a podcast in a crowded bus or shopping mall without any disturbance. You can also choose from 3 noise cancellation modes. Indoor will work well in the library and office, Commuting while traveling on public transportation, and Boosted will handle the loudest noise and come in handy in a store, for example.

Talk anywhere

The QCY HT05 are equipped with 6 microphones and ENC technology, making them perfect for phone calls. The noise-canceling microphones accurately capture the human voice, while ENC effectively filters out background noise. Also noteworthy is the Wind noise cancellation mode, which makes it easier to talk even in strong gusts of wind.

High-quality sound

The 10-millimeter LCP dynamic drivers guarantee excellent sound quality. So you can enjoy high audio levels, and your favorite songs will delight you with clear treble and deep bass. The headphones also offer Transparency mode, which allows you to stay in touch with your surroundings - useful, for example, at a train station.

Long operating time

The TWS QCY HT05 headphones also impress with their long operating time. With ANC mode on, they provide 3.5 h of talk time and 6 h of playback, while with ANC mode off, the time increases to 4 and 7.5 h, respectively. Most importantly, with the charging case the headphones can work for up to 24 h (with ANC mode on) and up to 30 h without ANC mode.

Convenient operation

The HT05 have practical touch panels that allow you to manage many functions without taking out your smartphone. With just the right number of touches, for example, you can answer and end a call, pause and resume playback, switch a song or launch the voice assistant. You can also launch gaming mode from this level.

Additional capabilities in the app

Give yourself access to additional features. All you need to do is download the QCY app, which allows you to select the level of noise cancellation, enable sleep or adjust the sound balance. It also lets you use a pop-up window and quickly pair your headphones. The app is compatible with Android and iOS.

Included:
