Lens for phone 200x APEXEL APL-MS200

The Apexel APL-MS200 is an advanced smartphone lens that offers an impressive zoom of up to 200x. It allows you to take exceptional photos and explore your surroundings with unprecedented accuracy. It's the perfect tool for both hobby and educational applications!

LED backlighting

The lens is equipped with 12 bright LEDs that provide optimal illumination even in the most demanding conditions. The user can choose from 12 illumination modes, including different levels of brightness and color temperature, allowing you to perfectly adjust the light to your current needs. Another interesting option is the ability to choose the range of illumination - the available options are half-circle and full circle. The former will give your photos an original 3D effect and highlight details, while the latter will provide more brightness.

UV light

The integrated UV light with a wavelength of 395 nm makes it possible to check the authenticity of banknotes, among other things. Six UV LEDs make every detail perfectly visible. This makes the Apexel lens prove to be a versatile tool for many applications.

Even more conveniences

The APL-MS200 has a built-in CPL filter that effectively eliminates glare, providing a detailed and clear image. What's more, the

innovative mechanism allows you to precisely adjust the lens to your phone's camera in just a second, making your work much easier. Now you can get ready to record in no time! The lens is compatible with most smartphones on the market - both Android and iOS.

High quality workmanship and long working time

The accessory is equipped with a 100 mAh battery, which provides about 2 hours of continuous operation. In addition, high-quality materials used in the production of the lens guarantee its durability and resistance to damage, and its compact size allows it to be easily carried and used in various places.

Multiple applications

The lens offers up to 200x magnification, making it an ideal tool not only for taking photos, but also for making biological or chemical observations. Among other things, it is perfect for analyzing plant structures, minerals, fabrics, and even for inspecting electronic components.
