xTool Desktop Smoke Purifier Filter

The xTool F1 Desktop Air Purifier Smoke Absorber Filter is a key component to ensure effective air purification in your environment. The kit contains high-quality filters that precisely eliminate contaminants, including dust, smoke and unpleasant odors. Using advanced filtration technology, the unit offers cleaner and healthier air, which is crucial when working with devices that generate smoke and other particles.

Pre-filter - the first line of defense

The pre-filter acts as the first line of defense, capturing larger, visible particles of dust and dirt. Its regular maintenance, every 7-15 days, guarantees optimal operation of the device. Once more than 70% of the filter's surface is covered with dust that cannot be removed, it is recommended to replace it to maintain cleaning efficiency.

Main filter - elimination of gases and odors

The main filter with activated carbon is responsible for absorbing harmful gases and eliminating unpleasant odors. Regular cleaning of the filter is key to maintaining effective operation of the device. If the filter cannot be thoroughly cleaned, it is recommended to replace it every 2-3 months to ensure continuous and effective operation of the smoke canister.

HEPA H13 filter - advanced cleaning technology.

HEPA H13 filter is the heart of the filtration system. With a double-layer honeycomb design, the filter removes 99.97% of particles down to 0.3 micrometers in size. This is ideal for capturing fine pollutants such as smoke and dust that can adversely affect health. To maintain its maximum effectiveness, the HEPA filter should be replaced every 3-6 months.

Included

1x Pre-filter

1x HEPA H13 filter

1x Main filter with activated carbon
