

Maintenance-free AGM VRLA Battery Green Cell AGM13 6V 1.3Ah

Ref: 5903317223931

Maintenance-free AGM VRLA Battery Green Cell AGM13 6V 1.3Ah (for alarm system, cash register, toy)

Maintenance-free AGM VRLA Green Cell AGM13 6V 1.3Ah Battery (for alarm system, cash register, toy).

Green Cell's 6V AGM battery is a model made of high-quality materials, suitable for both buffer and cyclic operation. The battery is based on AGM technology, which means that the electrolyte is absorbed in a fiberglass separator, which prevents its leakage. This allows the battery to operate in many positions, not just vertical. This is a great, much safer alternative to lead-acid batteries.

AGM battery - The heart of your devices more efficient than ever

5+ years of service life
Guaranteed safety
Operation in various positions
High current capacity
Maintenance-free
Shock and impact resistant

What are AGM batteries?

AGM batteries are a type of lead-acid battery with high energy density. AGMs are sealed batteries in which the electrolyte is embedded in glass mat separators. This makes them safe and durable and more durable than other types of lead-acid batteries. They also require no maintenance.

Buffer operation

Buffer operation allows the battery to act as an emergency power supply for the connected device. The battery connected to the power system in case of failure of the main power source provides additional power. They are used in this way in alarm systems, UPSs, cash

registers or emergency lighting.

Cyclic operation

The cyclic use of a battery is to use it as a stand-alone power source. AGMs of this type are prepared for very frequent charging and discharging. Thus, they are used in wheelchairs, photovoltaic installations, golf carts, toys and lawnmowers.

Maintenance-free operation

Batteries made with AGM technology were created to ensure the greatest possible safety during use. Thanks to the self-regulation function (VRLA valves), AGMs provide up to 5+ years of maintenance-free operation. It increases the safety of the operation of the device, regardless of the position of the battery.
