Outdoor Camera with Built-in Solar Panel IMOU Cell 3C AIO

Outdoor Camera with Built-in Solar Panel IMOU Cell 3C AIO

The IMOU Cell 3C AIO camera combines advanced 2K QHD imaging technology with energy independence. The built-in 2W solar panel allows autonomous operation for up to 120 days. A 5,000 mAh battery, IP66 certification to guarantee resistance to harsh weather conditions, and easy installation without the need for cables make it an ideal choice for outdoor applications. The device guarantees clear images even at night, so it will give you a sense of security around the clock.

Features for security

The IMOU Cell 3C AIO offers two-way audio with echo cancellation and the ability to record custom alarm chimes. Advanced PIR-based motion detection options are available to minimize false alarms. It is possible to customize detection zones, set protection schedules and personalize alarm sounds - all from a dedicated app.

Clear night vision

A variety of night modes are available, providing a clear view of the camera even after dark. Infrared mode offers a black-and-white image, while Full-color presents the view in color. Smart, meanwhile, automatically switches modes when motion is detected.

Convenient storage of footage

Recordings can be stored both on a local microSD card with a capacity of up to 256GB and in the cloud with the IMOU Protect service, which offers up to 30 days of unlimited storage.

Modern monitoring features

The time-lapse function allows you to observe long-term events in a condensed form, which is ideal for observing environmental or construction changes. In addition, if suspicious activity is detected, you will receive a notification within 0.3 seconds, allowing you to react immediately. A 110 dB alarm will also sound, effectively deterring uninvited guests.
