

Computer Case Darkflash DK210 Graffiti (black)

Ref: 4710343793656

Computer Case Darkflash DK210 Graffiti (black)

Darkflash DK210 Graffiti PC case

Give your computer case your own character! Thanks to the unique front panel, you can decorate the case with a drawing or an inscription of your own, which not only matches your style, but also changes colour thanks to the ARGB backlight compatibility. The DK210 can be equipped with additional cooling. You can accommodate 360mm cooling on the front, 240mm on the top and 120mm on the back. That way, you don't only emphasise the gaming look of the case, but also make sure that your components are cooled optimally. USB 3.0, USB 2.0 and HD audio can be found on the top panel for an easy access.

Style and functionality

The side panels are mounted with thumb screws, making them easy to remove. This provides quick access to components, should you need to equip it with new parts or for routine internal cleaning. The left side panel is enriched with a tempered glass that shields the case's interior from external influences and perfectly showcases the components located there, equipped with RGB backlighting.

Built-in Ports

On the top you will find the on/off switch, USB 3.0, USB 2.0 and HD audio ports. This makes it easy to access the contents of any portable memory device and plug in your gaming headphones, whether they're USB or minijack. Thanks to the LED button, you can also control the colour and type of RGB backlighting inside the case.

Space Organization

Easily assemble the components and keep a good order inside the case. Special brackets can be used for the installation of HDD and SSD directly into the case without any additional rails.

7 slots horizontally and vertically

The case provides the possibility to connect 7 different components to the PCI slots of the mainboard. Furthermore, the slots located at the back of the case can be shifted to vertical position. This is the ideal solution to display the full RGB colours of the graphics cards. The case is not equipped with mounting elements for other components.

Multiple fans can be built in

Ensure adequate cooling inside the case. Whether you want to install fan cooling or AIO cooling, you won't have to worry about mounting them. Mount the All in one water cooling in the top of the case if it measures 240 mm in diameter or in the front at 360 mm. Mount the additional fans at the back of the case and assure an adequate airflow.
