Dash camera Botslab G300H Pro 2304p@30fps

Botslab G300H Pro 2304p@30fps video recorder

The Botslab Dash Cam G300H Pro video recorder provides the highest quality recordings thanks to its 2K FHD resolution. The device offers a number of features that enhance comfort and safety while driving. Thanks to the built-in GPS, wide viewing angle (140°), ADAS technology and high quality night recording, every driver can feel more confident on the road.

2K FHD resolution and night recording

The Botslab G300H Pro records video in 2K resolution, so even the finest details are captured. The video recorder effectively records vehicle license plate numbers and other important elements that are needed in case of collisions or other incidents on the road. The Sony Starvis sensor provides crystal clear images even at night, ensuring clear and detailed recordings regardless of lighting conditions.

ADAS technology and 24/7 parking monitoring

Using ADAS technology, the video recorder warns you of approaching pedestrians and alerts you when a vehicle moves in front, making you safer on the road and helping you avoid potential collisions. It is possible to adjust the volume level of voice notifications and disable the function completely. In addition, the device offers 24-hour parking monitoring and records incidents even when the vehicle is stationary. For this function to work, however, it is necessary to equip yourself with additional wiring, which is not part of the kit.

Wide viewing angle and location tracking

With a viewing angle of 140°, the Botslab G300H Pro video recorder captures a wider area. The increased perspective helps capture events with greater accuracy, which is important in situations that require analysis of recordings. Thanks to its integration with Google Maps, the built-in GPS module allows you to precisely track your route. Each trip is recorded with location accuracy, which can be extremely useful if you need to analyze your route.

Record protection and loop recording

The built-in G-Sensor automatically protects recordings if a sudden shock or collision is detected. This ensures that important recordings will not be overwritten or lost. The Botslab G300H Pro video recorder also supports loop recording, which means that new recordings automatically replace the oldest ones, providing uninterrupted monitoring without the need to manually delete files.

Solutions for convenience

The live view function allows you to monitor the traffic situation in real time from the mobile app, making it easier to respond immediately in emergency situations. The video recorder supports MicroSD cards up to 128GB, providing ample storage space for your recordings. This way you can be sure that all important moments will be preserved.

OTA updates and compact design

Regular OTA (Over-The-Air) updates ensure that the Botslab G300H Pro always uses the latest features. The update process is simple and fast. The device also features a compact design that makes it easy to install and out of the way while driving. Installation is hassle-free-just attach the video recorder to the windshield and connect to the power supply.

Included:

Botslab G300H Pro video recorder
Car charger
USB power cable
Installation tool
Electrostatic film
User manual

Manufacturer: Botslab
Model: G300H Pro
