Ref: 6930460007438

Xparkle XF150 Portable Power Station

With the Xparkle XF150 Portable Power Station, you can rest assured about the power level of your electronic devices. The device has 7 charging ports, including USB with QC3.0 standard, USB-C or AC 150W. Its large capacity allows you to charge your selected equipment multiple times, up to 10 cycles. Its compact and lightweight design supports easy transportation, so you can take it with you virtually anywhere.

Plenty of possibilities

The station has been equipped with a number of ports, which provide the possibility of charging up to 7 devices at the same time. These are 3 USB-A ports (one in standard QC3.0), USB-C, 2 AC 150W ports and DC 12V. This way you can successfully top up your smartphone, laptop, tablet, drone or other small electronic devices.

High efficiency

The station is powered by a high-performance LiFePO4 battery with a lifespan of up to 2000 cycles, which is 2 to 4 times longer than with lithium-ion batteries. Moreover, with a capacity of 153 Wh, you can charge an iPhone 12 10 times, an iPad Pro 4 times or a Phantom 4 Pro drone 4 times. Note: The XF150 is not compatible with devices with power exceeding 200W.

Charge as you please

The device can be recharged in the standard way - by plugging it into a power socket - the process of replenishing energy will then take about 5 hours. What's more, you can use solar panels or a 12V car charger to restore power to the station (charging time is 4-6 hours in the case of a car charger).

Well thought-out design

Compact dimensions and low weight (2kg) make it comfortable to transport, so you can take it with you practically everywhere. The device is also equipped with a LED flashlight with Strobe and SOS modes and a fireproof casing. A built-in fan ensures efficient heat dissipation. All this makes the Xparkle XF150 an efficient, reliable and convenient device which will serve you for many years.
