QCY HT05 TWS earphones (white)

Looking for headphones that will delight you with excellent noise cancellation and cut you off from external noises? The QCY HT05 will live up to your expectations. The TWS headphones use ANC technology to reduce noise by up to 40 dB, plus Wind noise cancellation to listen to podcasts and music on a windy day. Also noteworthy are the 6 microphones and ENC, dynamic 10-millimetre drivers, as well as a long operating time of up to 30 hours.

Forget the noise

What sets the HT05 apart from other headphones is the excellent ANC noise reduction, which effectively reduces noise to 40 dB. So you can listen to music or a podcast on a crowded bus or in a shopping mall without any problems. You can also choose from 3 noise-cancelling modes. Indoor is perfect for the library and office, Commuting while travelling on public transport, and Boosted handles the loudest of noises, for example in the shop.

Talk anywhere

QCY HT05 is equipped with 6 microphones and ENC technology, making it ideal for phone calls. The noise-cancelling microphones capture your voice accurately, while ENC effectively filters out surrounding noise. Another noteworthy feature is the Wind noise cancellation mode, which makes it easier to talk even in strong gusts of wind.

#### High-quality sound

The 10 mm LCP dynamic drivers ensure excellent sound quality. So you can enjoy high quality audio, and your favourite songs will delight you with clear highs and deep bass. The headphones also offer Transparency mode, which lets you stay in touch with your surroundings - useful, for example, at the train station.

#### Long operating time

The TWS QCY HT05 headphones also impress with their long operating time. With ANC mode on, they provide 3.5 h of talk time and 6 h of playback time, while with ANC mode off, this increases to 4 and 7.5 h respectively. Most importantly, with the charging case the headphones can work for up to 24 h (with ANC mode on) and up to 30 h without ANC mode.

#### Convenient operation

The HT05 have practical touch panels that allow you to manage many functions without having to take out your smartphone. With just the right number of touches, for example, you can answer and end a call, pause and resume playback, switch songs or start the voice assistant. You can also launch gaming mode from this level.

#### Additional in-app capabilities

Give yourself access to additional functions. Just download the QCY app, which lets you select the level of noise reduction, turn on sleep or adjust the sound balance. It also lets you use a pop-up window and pair your headphones quickly. The app is compatible with Android and iOS.

#### In the kit
