Rainforest Humidifier Smartmi

Ref: 6970403202537

Smartmi Rainforest Humidifier Evaporative Humidifier

Create a healthy and safe environment in your home. Bad mood, dry eyes and skin - these and other problems are a thing of the past. The Smartmi humidifier is equipped with a 3-liter tank and has a capacity of 200 ml/h, being able to work efficient on the area of up to 35 m2. In addition, the device has transparent walls, which allows you to observe water droplets imitating rain. What's more, the LED display will provide you with the most important information about the operation of the device. In addition, operation of the humidifier is facilitated by the Smartmi Link app and Apple HomeKit. The device also works with Hey Google and Amazon Alexa - with a simple voice command, you can customize its operation.

Smart humidification

Smartmi Rainforest Humidifier uses evaporative humidification technology. This means that it is equipped with a fan that draws dry air into the device and forces it through a filter. The air returned to the environment is then humidified and cleaned of major contaminants. In addition, it does not produce mist - so you can be sure that it will not damage wooden furniture. On the other hand, the anions generated by the humidifier improve your mood and concentration.

User-friendly

The Smartmi Rainforest Humidifier is distinguished by its carefully thought-out design. The device has an LED display that informs about

the selected operation mode, Wi-Fi status, humidity level and the amount of water in the tank. What's more, the main components of the device can be easily disassembled and cleaned, and refilling the tank will not be a problem and will only take a moment.

Pollution filtration

The device is equipped with a polymer filter, which effectively filters out contaminants, prevents the proliferation of bacteria, mold and unpleasant odor. What's more, you can clean it under running water.

Up to 15 h of humidification

The humidifier has a 3-liter water tank, which reduces the frequency of refilling. As a result, it works for up to 15 h on a single fill. What's more, you don't have to remove it to add water. You will refill its level through the dome display on top. On the other hand, the LED display will provide you with information about the amount of water and will automatically stop operation when the tank is empty.

Quiet operation

Smartmi Rainforest Humidifier works extremely quietly - its noise level is ≤ 50 dB(A), so you don't have to worry about annoying noise. What's more, the relaxing sound will let you calm down, making it perfect for the bedroom.

Customize its operation to suit your needs

The humidifier offers 3 modes of operation, so it will meet different user expectations. In Auto mode, the device will automatically adjust the intensity of humidification to ambient conditions, while Max mode will quickly and efficiently humidify the air. The Sleeping mode, on the other hand, will allow you to relax before going to bed.

Self-cleaning mode

For even more convenience, the device has a self-cleaning mode, which you will enable from the Smartmi Link app. This will clean the device of sediment and debris on the walls of the tank. No more getting your hands dirty, just a few clicks in the app.

Remote control

The device works with Smartmi Link and Apple HomeKit apps, so you can control it remotely. In addition, the humidifier is compatible with Amazon Alexa and Google Assistant - so a simple voice command is all you need to turn on the device or select the mode.
