

## Landing Gear Extensions PGYTECH for DJI Mini 3 Pro (P-30A-05)

Ref: 6970801337671

Landing Gear Extensions PGYTECH for DJI Mini 3 Pro (P-30A-05)

PGYTECH landing gear lift for DJI Mini 3 Pro (P-30A-050)

The undercarriage boost increases the stability and safety of the drone during takeoff and landing. It increases them by 25 mm, and thanks to its lightweight design (17 g), it does not affect the flight of the DJI Mini 3 Pro. It does not need to be disassembled for storage, and silicone pads provide cushioning.

**Stability and safety**

The P-30A-050 is made of high-quality PC and ABS materials, which translates into high shock absorption. This makes the drone less susceptible to damage, even during an emergency landing.

**Easy installation**

Mounting the elevation will not cause you any problems. Thanks to its well-thought-out design, you will mount or dismount it in no time without worrying about damaging or scratching your drone. You also don't need to remove the P-30A-050 to assemble the DJI Mini 3 Pro.

**Included**

rear landing gear elevation x2  
front landing gear elevation x2

instruction manual

Manufacturer

PGYTECH

Model

P-30A-050
