

Smart Wi-Fi temperature and humidity monitoring switch Sonoff

Smart Wi-Fi temperature and humidity monitoring switch Sonoff

Ref: 6920075777543

ZigBee Gateway Sonoff ZigBee 3.0 USB Dongle Plus-E

The Sonoff THR320D is a 20 A relay that will find its use in indoor swimming pools, wineries or terrariums. It will also work well for home heating, irrigation systems or greenhouses. The product works with temperature and humidity sensors. You can also create schedules from the app and use Auto mode.

Compatible

Sonoff relay supports devices with high power consumption, for example, underfloor heating. In addition, the RJ9 4P4C connector allows you to connect the product to other equipment. Depending on the sensor connected, you can control temperature, using the hermetic DS18B20 sensor, humidity (SI7021) or soil moisture, which the MS01 sensor allows. The product also works with Home Assistant and IFTTT, for greater freedom of use.

Remote control

The product allows you to remotely manage your devices via the eWeLink app. From it, you can turn the device on/off no matter where you are. In addition, it is possible to set a timer or schedule, and the 8 available programs will allow you to customize the THR320D's operation and save money on your electricity bill. The product is also compatible with Amazon Alexa and Google Assistant. Moreover, with LAN support, you can use the switch even when network access is temporarily unavailable.

Stay up to date

The Sonoff smart switch monitors temperature and humidity in real time. If the equipment is turned on/off or the devices reach the value you set, you will be notified via the app. You can also automate the switch with smart devices, for example, smart outlets or heaters. That's not all! The app also allows you to view temperature and humidity history in graph form by hour, day and month. And you can export historical data for the last 6 months in xlsx format.

Thoughtful design

The Sonoff THR320D smart switch is distinguished by its carefully thought-out design. The product features a large button that you can use to turn the device on/off. The included mounting rail allows you to easily attach the device to the desired location, and the shield on the front ensures safety. In addition, an improved wiring system protects against short circuits.

Safety of use

The switch uses high-quality materials that meet UL and RoHS requirements. It is made of flame-resistant PC, and thanks to its carefully considered design, you can safely use it during adverse weather conditions, for example, thunderstorms. What's more, the RJ9 4P4C connector ensures a stable and reliable connection.
