

Ultrasonic Cleansing Instrument with ionization InFace CF-06

Ultrasonic Cleansing Instrument with ionization InFace CF-06

Ref: 6971308401216

Cavitation peeling with ionization InFace CF-06F (white).

Discover a new level of facial cleansing! InFace cavitation peeling with ionization will allow you to deeply cleanse your skin and give it a healthy and fresh look. I use ultrasonic and iontophoresis technology that will remove all impurities. The device is extremely easy and convenient to use, and the cordless design will give you freedom during use. It also features IPX6 water resistance, so you can use it even in the shower.

Ultrasonic technology

The InFace CF-06F cavitation peeling uses high-frequency ultrasonic technology that penetrates the skin and effectively removes blackheads, excess sebum and other impurities. The device will allow you to eliminate dirt that you are unable to get rid of during your regular daily skin care!

Deep skin nourishment

Take care of your skin from the inside out! Ultrasonic iontophoresis significantly improves the absorption of products used during skin care. It introduces nutrients contained in cosmetics into the deeper layers of the dermis, which provide deep nourishment to the skin.

Non-invasive lifting

Restore a youthful and radiant appearance to the face. EMS massage stimulates muscles with microcurrents, which stimulate the skin to produce collagen. As a result, the skin becomes firmer and smoother. What's more, it will allow you to model the contour of your face!

Designed for your convenience

The device is distinguished by its IPX6 water resistance level. So you can use the scrub while bathing without worry. The carefully thought-out design ensures that the product does not make annoying noises during operation, making the grooming process even more pleasant. In addition, it has a convenient button, with which you can easily turn on, off or change the mode of operation.

Wireless solution

The built-in 500 mAh rechargeable battery allows for 45-minute wireless use, so you can carry out skin care treatments anywhere without any problems. You charge the scrub with the included USB cable - it will be ready to use again after about 2 hours. The device has a built-in smart chip that will turn the device off after a long period of inactivity to save energy.

Included

cavitation scrubber
USB-C cable (50 cm)
