

Electric Callus Remover for Feet Enchen Rock

Electric Callus Remover for Feet Enchen Rock

Ref: 6974728539132

ENCHEN Rock electric heel grater/moulder

Take care of the smoothness of your feet with the cordless electric heel router from Enchen. The device offers two modes - the first is suitable for daily care, while the second will remove stubborn hardening and corns. The set comes with three interchangeable heads, which will make it easier for you to perform pedicures. What's more, the device is equipped with a system that protects against any scratches and cuts, and keeping it clean won't be a problem, as you can easily wash it under running water.

Easy to use

The electric grater was created with comfort in mind. It features a universal button, with the help of which you can easily turn the cutter on/off, set the standby mode or switch the operation mode. The side button will allow you to change the head, and the included cable will make it easy to replenish energy in a discharged device.

3 interchangeable heads

Depending on your needs, you can use 3 heads differing in gradation, with the help of which you can easily take care of your feet. The first will prove useful for daily care, the second will rid your heels of delicate hardening, and the third will effectively remove keratinized skin and bothersome calluses.

2 modes of operation

You can customize the mode of the cutter to suit your needs. Mode one offers operation at 2200 rpm and will work well for everyday use, while mode two operates at 2600 rpm to effectively remove more strenuous hardening.

Automatic drying

Using the milling machine is completely hygienic. Its waterproof rating is IPX6, so you can easily wash it under running water (no longer than 2-3 minutes). All you need to do is put the cover over the head and press the button to start automatic drying. This will prevent bacteria from multiplying on its surface. The cover will also make it easier to store the device after the pedicure is over.

Powerful battery

The Rock milling machine is equipped with a 1500 mAh lithium-ion rechargeable battery, which allows up to 2.5 hours of cordless operation. Charging with the included USB cable won't generate much power consumption and will also take you 2.5 hours. At the same time, the device is lightweight and handy, so you can successfully take it on any vacation!

Smart security

The device uses an intelligent system that effectively reduces the risk of scratches and cuts. The milling machine will automatically turn off if you press it too hard against your skin. You don't have to worry about painful abrasions.
