Ref: 6970801339378

Set of 4 filters PGYTECH CPL+ND-PL (NDPL 8/16/32/64) for DJ

PGYTECH CPL+ ND-PL Set of 4 Filters (ND-PL 8/16/32/64) for DJI Mavic 3 Classic

If you fly drones professionally and appreciate high-quality photos, you'll definitely like this set of filters from PGYTEch, which will enable you to get fantastic shots in almost any lighting conditions. The accessories are distinguished by incredible durability, which is due to high-quality materials. The special oleophobic and hydrophobic coating will help keep the lens clean, and the surprisingly low weight will not disturb the perfect balance of your drone.

Classic UV filter

The professional hard-coated UV filter prevents UV rays from entering the camera lens, helping to effectively reduce blue light. This will make your photos in open spaces such as the sea or mountains sharper and clearer, with colors closer to reality. The filter will also protect the lens from mechanical damage.

CPL filter to reduce glare

No more unwanted glare. With the CPL filter, you will effectively reduce the reflected light from non-metallic surfaces, which will help you achieve stunning effects. It will work great when you take photos over water, for example - the sheetrock will reflect less light, so you can see what's underneath. Your photos will gain perfect color saturation and excellent image clarity. A small turn is all it takes to change the direction of polarization.

Hybrid ND-PL filter

This filter will not only help to reduce unwanted glare and increase color saturation, but will also give you a sharper image, making your photos even more vivid. The ND-PL filter extends the shutter speed and prevents overexposure, which will help create more cinematic effects in your footage or take long exposure shots. A slight rotation will help change the polarizing effect.

Thoughtful design

The framing of the filters is made of CNC aluminum, making them highly resistant to damage, yet so lightweight that they won't disturb the perfect balance of the drone. In addition, the professional optical glass used in the filters has been polished and honed many times, effectively lowering the refractive index, so the colors of your photos will not deviate from reality.

Additional facilities

All filters are distinguished by high scratch resistance and have gained a special coating that protects the lens from water and greasy stains on both sides. All this makes it easy for you to keep them clean and they will successfully serve you for a long time.

Kit contents:

Set of professional filters NDPL 8 16 32 64

Cleaning cloth

Operating instructions

Manufacturer

PGYTECH

Model

P-39A-014

Compatibility

DJI Mavic 3

Material

Aluminum, optical glass

Dimensions

φ37.24mm x 4.9mm

Weight

5.7g x 4

Preço:
