

## Portable Power Station Romoss RS300 Thunder Series, 300W, 23

Ref: 6936857202264

Portable Power Station Romoss RS300 Thunder Series, 300W, 23

Romoss RS300 Thunder Series Portable Power Station, 300W, 231Wh

Don't give up using the equipment you need, even during power outages. The Romoss RS300 Thunder Series Portable Power Station stands out with a capacity of 231 Wh and Power Boost drive technology with a power rating of up to 300 W. The housing of the device is made of durable and fire-resistant materials, such as PC and ABS. In addition, the device is equipped with several ports, supporting PD protocols, so it will be compatible with most of your devices.

The perfect travel companion

Going on a camping trip with your loved ones? Or are you planning a fishing trip or a mountain excursion? The RS300 will prove itself in any situation! The device has AC, USB-A and USB-C ports, as well as a regular electrical outlet, making it a versatile device for any trip. In addition, the Romoss RS300 stands out with a power rating of up to 300 watts and a capacity of as much as 231 Wh. Have the station always with you and be ready for any circumstance!

Robust design

The housing of the device is made of sturdy and fire-resistant materials, such as PC and ABS. The solution used made the device able to withstand pressure of up to 85 kg and is shockproof. It will not be harmed by a fall from as high as 1.2 meters. Moreover, the protective cover eliminates the risk of sand or dust getting into the station. The dimensions of the product are just 19.2 x 14.2 x 14.8 cm, and it

weighs 2.78 kg

#### Additional advantages

When designing the Romoss portable power station, every detail was taken care of. The device is equipped with a flashlight, which will make it easier for you to perform various activities after dark, or to call for help in case of need. In addition, powering the device is done efficiently using an AC adapter, car charger or solar panel.

#### Total safety of use

The Romoss station is distinguished by its BMS protection system, and its use is completely safe. The device has received UL certification, which proves its high quality workmanship. You can freely power your devices without worrying about overheating, overloading or short-circuiting. The SoC display will inform you about the most important information about the device's operation, such as temperature or battery level.
