

Smart Thermostat Radiator Valve Avatto TRV06 Zigbee 3.0 TUYA

Ref: 6976037360001

Smart Thermostat Radiator Valve Avatto TRV06 Zigbee 3.0 TUYA

Smart thermostatic valve Avatto TRV06 Zigbee 3.0 TUYA

Make your apartment pleasantly warm. The Avatto TRV06 smart thermostatic valve allows you to control it remotely from almost anywhere in the world using the Tuya app, as well as to create operating schedules. The Hub (not included) will allow you to use all the functions that the thermostat valve offers. It also works with intelligent voice assistants. It has a number of practical functions, including open window detection, descaling and freeze protection. It also features an LED display for easy access to key information.

Decalcification function

Have confidence that your heater is fully operational. The TRV06 head once every two weeks opens the valve completely for about 30 seconds. This solution will prevent the formation of a large amount of scale. The display will show "Ad", and after 30 seconds the radiator returns to its previous operating state.

Intelligent detection of an open window

High heating bills are a thing of the past. The device has an open window function. What does this mean? When the thermostatic valve detects a drop in room temperature by more than 6°C within 4 minutes, it will immediately turn off the heater. This solution will save you money! The function will turn off after detecting a temperature rise of 3°C or automatically after 48 minutes. You can also turn it off manually.

Even more possibilities

The TRV06 offers an Anti-Freezing function that effectively protects the system from freezing. When the heater is turned off and the room temperature goes below 5°C, the device will automatically turn on the heater. What's more, the valve intelligently saves the last set parameters - an extremely helpful feature especially in case of power failure. Child protection is also available, and it is possible to control several thermostats in different rooms.

Convenient remote operation

All the most important information at your fingertips! Download the Tuya Smart app to your smartphone or tablet and conveniently manage the TRV06 valve from anywhere. Once you connect the device to a hub (not included), you can also operate it with smart voice assistants including Smart Things, Google Assistant or Amazon Alexa - a simple voice command is all it takes to set the room temperature! It is also possible to share the device with other members to create a smart home together.

Match its operation to your schedule

Now you can easily adjust the heating in your home to your lifestyle. The device allows you to create weekly operating schedules via the app. Thanks to it, you can easily adjust the temperature of each room to your needs. You no longer have to worry about waking up in the morning in a freezing room!

With attention to detail

The Avatto thermostatic valve is equipped with an easy-to-read LED display, thanks to which you will gain access to the most important information on the status of its operation. From its level you will learn about the status of heating, the set temperature or the selected mode. It will also notify you of a low level of battery charge.

Included

smart thermostatic valve

Danfoss RA adapter

Danfoss RAV adapter

Danfoss RAVL adapter

instruction manual

Manufacturer

Avatto

Model

TVR06

Color

White

Dimensions

118 x 124 x 33 mm

Material

ABS, tempered glass

System requirements

iOS 8.0 (and later) / Android 4.0 (and later)

Voice assistants

Amazon Alexa, Google Home, Yandex Alice, Smart thing, etc.

App

Smart Life / Tuya Smart

Wireless connection

2.4 GHz / 2.4 GHz & 5 GHz

Wireless communication protocol

Zigbee 3.0
Power supply
2x AA 1.5V battery (not included)
Temperature sensor
NTC
Temperature range
5°C~60°C
Temperature accuracy
±1°C
Input voltage
AC 110~240V, 50/60 Hz
Rated current
10A
Rated power
800W
Standby consumption
0.45W/0.1mA
Operating temperature
-10°C~40°C
