

Polarized cycling glasses Rockbros 10171

Polarized cycling glasses Rockbros 10171

Ref: 5905316146198

Bicycle glasses, polarized Rockbros 10171

Do you ride a bicycle? Do you fish? Or maybe you're just a fan of the outdoors? Take care of your comfort and bet on Rockbros polarized sports glasses! The large lenses provide a wide field of vision, and the polarizing filter effectively reduces reflected light, so you can see clearly and distinctly. The lens surface is resistant to dust and stains. The glasses are extremely lightweight and do not cause discomfort, and the frame is made of flexible TR90 material, so the glasses are resistant to stretching and bending and will easily fit the shape of your face. The glasses come with frames dedicated to nearsighted people.

Clear vision in all conditions

The lenses of Rockbros eyeglasses have a polarizing filter to eliminate glare and blinding, scattered light that reflects off various surfaces. This solution allows you to see clearly even on the sunniest day. The glasses will improve your comfort while driving or cycling during the day, and are great for mountain hiking or fishing, when the scattered light is particularly glaring.

Thoughtful design

The product is made of high-quality TR90 material, which is why it is so resistant. The goggles won't be harmed by bending and stretching, and will easily fit any face. What's more, you can easily adjust the adjustable nose pads to suit your needs. The temples are hollow, so they are extremely lightweight and won't cause discomfort even when wearing the glasses for hours. The large integrated lens

is framed only in the middle - such a solution provides a wide field of vision and does not interfere with the image, which is especially important when riding, for example, a bicycle.

Integrated corrective frames

Are you short-sighted and have a hard time without glasses? Now it's not a problem! Rockbros glasses have been equipped with specially designed frames for corrective lenses, which fit perfectly into the polarized lens and are separated from it by special rubber discs. All you need to do is to insert into the frames the lenses suitable for your defect to see clearly and clearly, in all conditions.
