Earphones TWS 1MORE Evo, ANC (black)

1MORE Evo headphones (black)

Looking for headphones that allow you to enjoy listening to music even more? The 1MORE Evo headphones are sure to meet your expectations! They are Hi-Res Audio Wireless certified and feature 10mm drivers for richly detailed sound. They support QuietMax noise reduction, which effectively eliminates ambient noise up to 42 dB, and offer 4 ANC modes. A dedicated app allows you to customise the headphones to your preference, and built-in microphones allow you to make calls. The long-lasting batteries ensure a long run time, and they are easy to operate with touch panels. They are also distinguished by their ergonomic and waterproof design.

Take your music experience to a new level

Fall in love with music all over again. Dynamic 10mm drivers combined with Quiet Max hybrid active noise cancellation technology allow you to fully focus on the beauty of the songs you are playing. The headphones are Hi-Res Audio Wireless certified and use the LDAC codec, meaning they deliver the highest quality sound. All this means you can enjoy crystal clear sound saturated with detail, crisp vocals, and powerful bass.

Additional capabilities with the app

The dedicated 1MORE Music app allows you to choose from 12 EQ settings to suit different music genres. Whether you prefer hip-hop,

classical or electronic music, you can easily find a setting that suits the music you like. Want to further customise the headphones to suit your tastes? Take advantage of the manual setting equalizer!

They'll work in any situation

Immerse yourself in the sounds of music and forget about the world around you. The 1MORE EVO headphones use innovative noise cancellation technology which offers up to 4 modes. Adaptive ANC automatically adjusts the noise cancellation level to the environment you are in. ANC Strong mode comes in handy when travelling by plane or train - it reduces noise up to 42 dB. Want to increase your concentration while working? Use the ANC Mild mode! On windy days, WNR, which automatically reduces wind noise, is perfect. Prefer to stay in touch with your surroundings? Take advantage of the Transparency mode!

Reliable signal transmission

Say goodbye to interference and delays! 1MORE Evo uses Bluetooth 5.2 technology, which provides a fast and uninterrupted connection of up to 10 m. Effortlessly connect to up to 2 devices at the same time - you can conveniently switch between paired devices without having to reconnect. What's more, the headphones support Google Fast Pair, which will make pairing Android devices easy.

Talk freely on the phone

Each headphone is equipped with 3 microphones which, combined with the intelligent DNN (Deep Neural Network) algorithm, will reliably record your voice even in noisy areas. The algorithm developed by 1MORE effectively eliminates all unwanted background noise. You can be sure that your interlocutor will hear every word you say, no matter where you are.

Listen to music for up to 28 hours

Enjoy the sounds of your favourite songs for as long as you like! The headphones can last up to 8 hours when ANC mode is off or up to 5.5 hours when it is on. Want to extend that time? No problem - use the charging case and extend their runtime to up to 28 hours! The headphones also support fast charging, so you can play music for another 4 hours after just 15 minutes of charging. What's more, you can easily charge them using the wireless charger.

With comfort in mind

The headphones have been designed to provide maximum comfort even during prolonged use. Thanks to their carefully considered design, they fit snugly and won't fall out of your ears. You'll also find 5 pairs of interchangeable rubber bands in different sizes in the set, making them even more customisable. They are also IPX4 waterproof - rain drops and sweat won't scare them off!

Even easier to use

Now you can conveniently manage your music player without having to reach for your phone! The headphones have been equipped with intuitive touch panels for easy operation. You can use them to pause or resume playback, activate the voice assistant or change modes. What's more, you can personalise the functions of the panels using the 1MORE Music app.
