Filter polaryzacyjny Freewell for DJI Avata

Ref: 6972971860294

Freewell polarising filter for DJI Avata

The Freewell polarising filter has been designed specifically for the DJI Avata drone. It reduces unwanted light reflections from water or other surfaces, allowing for more natural colours, deeper contrast and clearer details. It uses high quality optical glass that is scratch and dust resistant. Thanks to the use of a lightweight aluminium alloy, the filter weighs just 0.5g - so you don't have to worry about it interfering with your drone's performance.
