

Power supply Green Cell PRO 20V 4.5A 90W for Lenovo G500 G50

Ref: 5903317225645

Power supply Green Cell PRO 20V 4.5A 90W for Lenovo G500 G50

Green Cell PRO 20V 4.5A 90W power adapter for Lenovo G500 G500s G510 Z51-70 IdeaPad Z510 Z710 ThinkPad T440s T460p T470p
The Green Cell PRO power adapter will quickly and safely charge your Lenovo G500 G500s G510 Z51-70 IdeaPad Z510 Z710 ThinkPad T440s T460p T470p laptop. The PRO series charger is ideal if your old power supply has failed or you need a second charger for example for the office. The power supply is distinguished by the highest quality of the components used and thus by its durability and operational safety.

A charger that lasts for years

While most power supplies only last 1-2 years, the Green Cell PRO power supply guarantees more than 3 years of trouble-free operation, even with continuous intensive use. In addition, the safety of the devices being charged is incomparably greater than with standard power supplies.

Functional solutions

Higher quality diodes and transistors ensure a higher maximum operating temperature and higher efficiency. The input voltage of the power supply is additionally filtered and a set of protections ensures overvoltage, short-circuit and thermal protection. The product dissipates heat more efficiently, so the power supply heats up less and wears out more slowly. The power supply is equipped with a durable 1.2m mains cable.

Choose the right model

How do you make sure the power adapter will be suitable for your laptop? This model of Green Cell PRO power adapter is dedicated to Lenovo G500 G500s G510 Z51-70 IdeaPad Z510 Z710 ThinkPad T440s T460p T470p series laptops, however depending on the specific configuration of your computer the manufacturer may have used a charger with a slightly different wattage or connector type. To make sure the power supply will be 100% suitable check the relevant parameters.

Compare the values given

You can check the required wattage on the bottom of the laptop, where it is marked as Input e.g. 90W and/or 19V□4.74A. The same values are marked as Output on the power supply attached to the laptop. The wattage value in watts or current value in amperes of the new power supply should not be lower than recommended. However, we can use a higher wattage power supply without any problems - it will be less loaded, so it will heat up less. The voltage may differ by a maximum of ±1V from the manufacturer's recommended

Fresh energy for your laptop

Opting for longer-lasting equipment not only saves you money, but also takes care of the environment. Your favourite laptop will get a new lease of life and we will take care of the recycling. We finance activities that promote and support the recovery and recycling of used electronic equipment.
