

Set of 3 filters PolarPro Shutter for GoPro Hero 9 / Hero 10

Ref: 817465026373

Set of 3 filters PolarPro Shutter for GoPro Hero 9 / Hero 10

Filters for cinema enthusiasts

Neutral density filters for the GoPro HERO 9 and HERO 10 Black cameras will meet the needs of any enthusiast dreaming of creating cinematic shots by extending the shutter speed. ND8, ND16, ND32 have been created to work in a variety of light conditions, providing perfect images at any time of day.

Durable glass

Each filter contains CinemaSeries™ glass that is highly resistant to scratches and rapidly changing conditions. Using 16 layers of coating, it eliminates flare and protects the filter from fingerprints and greasy stains.

Professional fit

PolarPro filters should be fitted in place of the standard filter supplied with GoPro cameras. This avoids the overlapping of different lenses and can achieve pristine images.

3 filters for all times of day

ND8 - ideal for just before sunset during the so-called golden hour or just after sunset during the blue hour. Increases shutter speed by 3 stops EV.

ND16 - will work best in the afternoon, thanks to a 4 degree EV increase in shutter speed.

ND32 - extends shutter speed by 5 degrees EV, working best on sunny, bright days.

Easy storage

The DoFilters can be stored easily and safely, thanks to the included sturdy case. This will allow them to be transported effortlessly without fear of damage or loss.
