

Smart Alarm Siren IMOU ZR1 ZigBee

Smart Alarm Siren IMOU ZR1 ZigBee

Ref: 6971927233779

IMOU ZR1 alarm siren

Ensure the security of your home and install an IMOU alarm siren in your home. The device can be used as part of a larger security system and paired with the IMOU network gateway (available for sale separately), so you'll receive a notification on your phone whenever the sensor detects an intruder. What's more, the siren sets off an 85 dB alarm, as well as a light signal, so it can effectively deter a potential intruder.

Remote alarm management

Once the siren is triggered, you can cancel the alarm locally, through the network gateway, or remotely with a single click on the app. The device operates on a 2.4GHz network and uses the Zigbee protocol, ensuring a stable signal without interference. You can remotely access management of the device from anywhere with internet access. From the app, you can also adjust the alarm volume - the maximum value is as high as 85 dB.

Robust design

The device is made of high-quality materials, so it can withstand extreme temperatures (-25°C - 55°C). This means that it will successfully serve you for a long time in almost any conditions. You can easily mount it on the wall or ceiling, protecting your home from unwanted visitors.

Kit contents

- 1x Alarm siren
- 1x 3M sticker
- 1x Screw and anchor
- 1x Power adapter
- 1x Quick start guide

Manufacturer

IMOU

Model

ZR1

Size

Φ80x34mm

Operating voltage

DC 12V

Operating temperature

-25°C - 55°C

Operating current

≤250mA

Installation method

wall/ceiling

Wireless protocol

Zigbee

Transmission frequency

2.4GHz

Communication distance

200m

Buzzer sound pressure

≥85dB

Standby current

≤20uA Transmit power: ≤15dBm

Receive sensitivity

-96dBm
