

Wireless Switch IMOU ZE1 ZigBee

Wireless Switch IMOU ZE1 ZigBee

Ref: 6971927233748

Wireless switch

IMOU's ZE1 is a wireless alarm switch based on the Zigbee protocol. You can install the product on the wall or set it up anywhere - its range is up to 200 meters. The device can be used to automate a smart home or to ensure the safety of children and the elderly. Using the IMOU Smart mobile app, you can easily set up events triggered by the press of a button, such as starting or turning off lights, generating an alarm or sending notifications to your smartphone in case you need help.

Additional amenities

The device is distinguished by its long operating time - the CR2032 lithium battery has a life of just over a year. If it needs to be replaced, you will automatically receive a notification. What's more, you are informed of every event via an app on your phone, so you will have full control over what is happening in your home. The switch connects to the IMOU control panel, which allows you to control smart devices easily and conveniently.

Call for help with one click

Are you caring for an ailing parent? Or are your children playing alone in the room? In an emergency situation, you can be informed of the existing danger. All you have to do is press a button for the person in need, and the dedicated app will immediately alert you. Let your household members feel safe with the ZE1 switch!
