

Smart LED Color Light Bulb Wi-Fi IMOU B5

Smart LED Color Light Bulb Wi-Fi IMOU B5

Ref: 6971927231676

Smart LED Color Light Bulb Wi-Fi IMOU B5

Ensure optimum illumination. The IMOU B5 smart bulb with E27 thread allows you to adjust the brightness and colour temperature of the light, and lets you change its colour. You can control it via the Imou Life app or even voice commands - it is compatible with the Amazon Alexa assistant. Control your devices in groups, use smart scenes and create work schedules - the possibilities are almost endless!

Adapt the lighting to your needs

Planning a romantic dinner or a house party? Do you work remotely? Or maybe the evening has arrived and you want to relax a little? The B5 light bulb allows you to customise the lighting to suit any occasion! With just a few clicks on the app, you can adjust the brightness of the light (up to 806 lm) or its colour temperature (2700-6500K). You can also choose from 16 million colours.

Try out intelligent scenes

Ensure an unforgettable atmosphere in any situation. The light bulb offers several smart scenes, which you will find in the app. Choose from the available options and ensure you have the perfect lighting for every occasion! Christmas or maybe Halloween? Find out how easy it is to create the right atmosphere with light!

Hassle-free configuration

Don't be afraid to have problems setting up your device. All you need to do is screw in the bulb, download the Imou Life app and then follow the instructions that will be displayed on your smartphone screen. Only a few simple steps separate you from smart lighting in your home! However, this is not the end of the convenience. You can also connect up to 6 bulbs together and control them in groups.

Create work schedules

Adapt the lighting to your schedule. The app allows you to create work schedules for selected devices. For example, you can set the lights to automatically switch on at 8 a.m. when you get up and off at 11 p.m. when you go to bed. Going on holiday? Set the light bulb to simulate your presence in the house - this will deter a potential thief.

Voice control

You're cooking, your hands are busy and you could use a little brighter light? Or maybe you're lying on the sofa, your phone is out of your reach, and you want to turn on the lights? No problem - the B5 light bulb is compatible with the Amazon Alexa voice assistant, so you can control it with your voice. Now all it takes is a simple command to turn off the lights or activate a smart scene without moving!

Optimal lighting for your home

The bulb generates eye-safe lighting that does not flicker or tire the eyes. This makes it ideal for use in children's rooms too! It is also distinguished by its long service life (up to 15,000 hours) and high colour rendering index (CRI > 80). This means that objects viewed in its light will have natural, clear colours! The B5 model is also energy efficient - say goodbye to high electricity bills.

Compatible with the Imou ecosystem

Add the B5 light bulb to your Imou ecosystem and create for yourself a smart home that feels good to live in. For example, you can combine it with a motion sensor or a door-opening sensor to make the light automatically turn on when someone enters the room. Test, test different settings and enjoy exceptional comfort!
