Gaming headphones EKSA E5000 Pro

Take on the role of the hero of your favorite title with the EKSA E5000 Pro. The gaming headphones provide 7.1 surround sound and dual drivers for impressive, richly detailed sound. In addition, they offer 2 modes (Music, Game) so you can customize their performance. What's more, the dual microphones eliminate ambient noise and accurately record your voice, and wide compatibility allows you to connect EKSA E5000 Pro to a variety of devices. They also stand out for their simple operation and ergonomic design. Among other things, you'll find cables with which to connect the headphones to the appropriate equipment.

7.1 surround sound

The headphones provide an exceptional sound experience thanks to the SoundBase 7.1 system. This translates into deep bass tones and a wider sound field, allowing you to hear the footsteps of an approaching enemy, gunfire, explosions and approaching vehicles. Note: the 7.1 effect is not available with a 3.5mm cable. Use a USB-C or USB-A cable for this purpose.

Dual drivers for better sound

The headphones use dual drivers: with one chamber for bass and another chamber for midrange and treble. This arrangement provides a better immersive experience and prevents distortion. You customize the sound with EKSA's DualPro channel - to reduce distortion, emphasize the bass, or get richer mids and highs. As a result, you can enjoy excellent sound that will make it easier to locate your

opponent and provide a path to victory.

Dual-mic system

EKSA E5000 Pro use a dual-mic system. This means that the headphones are equipped with a microphone for talking and a noise-canceling microphone. As a result, your voice is recorded accurately - you can be sure your caller will hear you. And ENC technology eliminates up to 99.8% of ambient noise, while amplifying your voice during a conversation. In addition, the microphone can be detached at any time if you don't need it. The kit also includes a wind shield that you can easily put over the microphone.

2 modes of operation

Music, gameplay - EKSA E5000 Pro will work perfectly in both situations. Using the dedicated button on the earpiece, you can choose from 2 modes of operation. For listening to music, set the Music mode and enjoy 3D stereo sound. Game mode, on the other hand, offers 7.1 surround sound for a higher level of immersion. Choose the right option for you!

Compatible

Another advantage of the EKSA E5000 Pro is its wide compatibility. The headphones work with computers, laptops, smartphones, PS4/5, Xbox and Nintendo Switch. What's more, the kit comes with 3.5mm audio to USB-C, USB-C to USB-C and USB-C to USB-A cables, with which you can connect the headphones to the equipment of your choice.

Convenient

Play your favorite games without feeling tired. The headphones use EKSA CloudSoft's high-quality protein leather earcups, making them soft and non-irritating. What's more, the memory foam provides unparalleled comfort and does not cause uncomfortable pressure. The ear cups fully cover your ears, and the adjustable headband allows you to customize the E5000 Pro. As a result, you can use them comfortably for a long time.

Easy to use

With EKSA E5000 Pro, the most important functions are right at your fingertips. One of the headphones has been equipped with a control panel, from which you customize its operation. Using dedicated buttons, you can adjust the volume, mute the microphone, set the operating mode and turn on/off the green backlight.
