

Carbon Fiber Propeller Guard Sunnylife for DJI Avata (AT-KC5)

Ref: 5905316147218

Carbon Fiber Propeller Guard Sunnylife for DJI Avata (AT-KC5)

Sunnylife carbon fiber propeller cover for DJI Avata (AT-KC572)

Do you fly a drone? If so, you've certainly taken risks more than once just to create breathtaking footage. The Sunnylife propeller cover was created for such occasions. The product is made of carbon fiber and EVA foam, making it extremely lightweight and providing full-size protection for the propellers of your DJI Avat. The cover guarantees the safety of your propeller in the event of a collision, and with it you can afford more! Forget about limitations and unleash your creativity!

The power of carbon fiber

Low weight (22 g) is key - the shield will not interfere with the dynamics of the drone's flight, yet it will provide reliable protection. The material is distinguished by exceptional durability, able to withstand most falls, impacts and loads. The cover effectively absorbs shocks, does not deform or crack. What's more, it features high resistance to high temperatures.

Precise fit for your drone

The shield is designed specifically for DJI's Avata series drones, so it guarantees a perfect fit to the propellers. It will not affect your drone's flight and will be visible on the materials you create. After the flight, you do not need to remove the cover - you can easily store the drone together with it, for example, in a dedicated case.

Double protection

For complete protection, the cowl comes with additional EVA foam straps. You can use them together with the carbon fiber cover or separately. The foam provides additional protection against collisions. With Sunnylife, you can feel safe during your sky travels!

Included

Cover

EVA foam straps x 12

Set of screws

Inbus

Manufacturer

Sunnylife

Model

AT-KC572

Compatibility

DJI Avata

Material

EVA carbon fiber

Weight

22 g
