

## Filter VND 3/6 stop for Mavic 3 Pro PolarPro

Filter VND 3/6 stop for Mavic 3 Pro PolarPro

Ref: 817465029244

Filter VND 3/6 for Mavic 3 Pro PolarPro

Get your best bird's eye shot ready. The VND 3/6 filter for the DJI Mavic 3 Pro drone allows you to precisely control the light entering the lens. This makes it perfect for most lighting conditions! High-quality CinemaSeries glass and lightweight yet durable aluminum are used for the accessory. Shorten the shutter speed using the laser-engraved degree indicators (3-6) - no more changing the filter every time!

Create even more magnificent shots

With the VND 3/6 filter from PolarPro, you can freely shorten the shutter speed depending on your needs and lighting conditions. You don't have to carry several filters with you anymore - with PolarPro you only need one. The ability to change the step from 3-6 makes the accessory extremely versatile.

Superior build quality

The filter frame was created from durable, yet extremely lightweight aircraft aluminum. As a result, the product does not weigh down the drone and does not negatively affect its flight. What's more, high-quality CinemaSeries glass was used to make the accessory, which guarantees fantastic clarity and stands out for its low refractive index. The filter is placed in a practical case, which makes it much easier to store and transport.
