Smart play ball for dog/cat Homerunpet TB10

Ref: 5907489606134

Homerun TB10 smart ball

If your cat doesn't get enough activity, it will not only get bored and may start to play, but it will also run around at night and won't let you sleep. So, it is worth taking care of providing him with properly engaging entertainment during the day. The Homerun TB10 intelligent ball will help you with that. It moves on its own in random directions and can engage all cat senses, stimulating its hunting instincts. With 2 play modes and up to 25 days of battery life after a battery change, it's even easier to use.

It will stimulate the cat's instincts

Homerun TB10 is equipped with a small, but incredibly powerful motor. It is also distinguished by a special processor, which detects the movement of the device. Thanks to it, the ball automatically changes its rolling direction in appropriate moments. Its unpredictable action will make your cat have to show real cleverness and commitment to "hunt" it down. Your fluffy hunter will certainly appreciate this form of activity!

Various stimuli

The toy appeals to your cat's various senses. The built-in laser light engages him visually, and the cord with the bell attached to the ball stimulates his hearing. That's not all! You can complete the toy yourself with additional DIY accessories, such as feathers or catnip, for example. So many different stimuli will certainly attract your pet's attention and encourage him to be active.

2 play modes to choose from

The ball can operate in 2 modes - normal and smart. When you choose the former, the device will run for 8 minutes. This is the perfect play time for your cat. And if you turn on the smart mode, a special built-in chip will make the ball turn on when you touch it, and after some time it will automatically turn off. Choose the option that suits you better and provide amazing entertainment for your pets!

Long working time

You can use ordinary AAA batteries to power the ball. They guarantee a surprisingly long operation time of the device. Assuming that your cat plays with the ball twice a day, after one battery change it can work up to 25 days. That is almost a month of perfect fun for your four-legged friend!

Cat's teeth are not a threat to it

The device was designed to be durable and easy to use. Made of durable PC plastic - it is resistant to falls, wear and tear, and bites. Thanks to the injection molding technique, the ball is also waterproof and dustproof. Moreover, to turn it on or off, all you have to do is gently press the button.
