Speakers SVEN MS-2080, 70W Bluetooth (black)

Ref: 6438162018771

SVEN MS-2080 Speaker, 70W Bluetooth (black)

The SVEN MS-2080 speakers will make you experience a whole new experience while watching movies, playing games and listening to music. With a wide frequency range of 45 Hz to 20 kHz, you will appreciate the balanced sound. A subwoofer with a 145mm driver delivers deep and powerful bass. Dual-band satellites generate mid- and high-frequencies, while resonance holes provide excellent low-frequency reproduction. The equipment features jacks for connecting audio sources, an LED display and a control panel. In addition, this model supports Bluetooth technology and offers playback from USB media and SD memory cards. It is also equipped with an FM receiver. A remote control is included for easy operation.

Sound that fills the room

Hear every sound - from breathing to explosions and the whirr of an engine to the pizzicato of a violin to a snare drum. A subwoofer with a 145mm driver serves as the system's central component, providing deep and powerful bass. In turn, dual-band satellites, which can be placed on a table or attached to a wall, produce mid and high frequencies. The passive heatsink vents on the front panel provide excellent low-frequency reproduction. The enclosure is made of wood, which translates into excellent acoustics and contributes to high-quality sound reproduction with natural sound. What's more, the range of 45 Hz to 20 kHz will make you fall in love with music all over again!

Reliable Bluetooth technology

The SVEN speaker supports Bluetooth technology, providing a stable connection to your device within a range of up to 10 meters. From now on, you can instantly turn on your favorite song, podcast or audiobook - just bring your phone close to the acoustic system. The pairing process will take just a few seconds. Enjoy superior sound quality and freedom without restrictive cables.

Freedom to play music

Collect your favorite songs on a USB drive or SD memory card and enjoy the delightful sound of a self-created playlist. SVEN speaker allows you to play audio files without connecting additional devices! Don't have a collection of your favorite songs at hand? No problem! Built-in FM radio allowing you to select the radio frequency on the LED screen provides a wide range of songs at any time of the day or night.

Control panel with LED display

The LED display provides convenient access to information on radio station frequency, volume level and song length (when playing from a USB/microSD card). In turn, the intuitive control panel allows you to search for any song by its number, enter the radio station frequency, select the audio input and more. Find out how convenient it is!

Convenient control

A practical remote control is included so you can enjoy convenient operation of the speakers. You no longer need to get up from the couch to adjust the volume and configure the various settings of the sound system. You will power the device with 2 AAA batteries, which you will find in the package. In addition, the speakers are equipped with practical buttons for intuitive operation.

Hassle-free installation

Using the fasteners and mounting holes that are located on the top of the back cover, you can easily attach the satellites to the wall at your convenience. With this solution, you will save space on your desk and enjoy optimal sound distribution in the room.
