

Set of 4 filters MCUV+CPL+ND4+ND8 Sunnylife for Insta360 GO

Ref: 5905316147577

Set of 4 filters MCUV+CPL+ND4+ND8 Sunnylife for Insta360 GO

Sunnylife MCUV CPL ND4 ND8 Filter Set of 4 for Insta360 GO 3/2.

The Sunnylife filter set consists of MCUV, CPL, ND4 and ND8 filters that will expand your creative possibilities and make it easier to get fantastic results, thanks to high quality materials and great quality. These filters will reduce flashes and the amount of UV radiation, and add life to your materials!

CPL filter

The CP filter brings out the natural beauty of your surroundings. This filter allows you to effectively reduce non-metallic glare while enhancing color intensity and highlighting the beauty of elements like sky, clouds and water. It works great for shooting through glass, on the surface of water and underwater, bringing unique results in a variety of conditions. With the CPL filter, you can achieve unique impressions in your photos, adding depth and character.

ND filters

The ND filter with different degrees (ND4, ND8) works by reducing the amount of light falling on the scene, which helps avoid overexposure. The effect is to emphasize color saturation and make the shot more vivid. With this filter, you can increase the exposure time, allowing you to capture moving objects as blurry streaks, such as water or lights. This creates an artistic blur effect that adds dynamics and character to the photograph.

MUV filter - protection and clarity

The MUV filter is a practical solution for enthusiasts and professionals alike. By reducing ultraviolet rays, it increases the camera's field of view, especially in mountainous scenery or at altitude. At the same time, it provides additional protection for the lens, protecting it from mechanical damage.

High quality workmanship

Sunnylife filter set, has been perfectly matched to the Insta360 GO 3/2 camera, guaranteeing a perfect fit that will give you a chance to get great results in your photos and videos. The filters are made of aluminum and optical glass, which not only ensures durability, but also guarantees light weight - just 0.8g per filter and compact dimensions of 18 x 4 mm. This makes using the filters convenient and practical, both during use and when carrying them with you. You will also find an elegant case, which is padded with soft EVA foam. This will ensure safe storage of the filters while traveling, eliminating the risk of damage.
