Set of 6 filters MCUV+CPL+ND4+ND8+ND16+ND32 Sunnylife for In

Sunnylife set of 6 MCUV CPL ND4 ND8 ND16 ND32 filters for Insta360 GO 3/2.

Sunnylife's filter set is a comprehensive tool for your creativity, including MCUV, CPL, ND4 and ND8 filters. This set expands your creative possibilities, making it easier to achieve fantastic results with top quality materials and excellent workmanship. These filters perform multiple tasks: they reduce flash and the amount of UV radiation, and add depth and life to your photos and videos. Using an MCUV filter helps protect your lens from harmful UV rays, which can improve the overall quality of your photos and videos. The CPL filter eliminates non-metallic reflections, enhancing colors and contrasts in your footage. ND4 and ND8 filters allow you to control the amount of light, allowing you to experiment creatively with exposure times and motion effects.

Multi-layer protection

Thanks to the multi-layer coated film, filters equipped with this protective layer not only ensure image clarity, but also preserve realistic colors. In addition, they protect the lens from the risk of scratches, moisture and oily dirt. This is ideal for enthusiasts and professionals alike who strive for excellent quality in every shot. The filter frame is made of lightweight aircraft-grade aluminum to further ensure product durability and strength.

CPL filter

The CPL filter allows you to bring out the natural beauty of your surroundings. It effectively reduces non-metallic glare while enhancing

color intensities and highlighting elements such as sky, clouds and water. It works great when shooting through glass and underwater.

ND filters

ND filters with different intensities (ND 4, ND 8, ND 16, ND 32) work by reducing the amount of light falling on the scene, which helps avoid overexposure. The use of ND filters allows you to increase the exposure time, which makes it possible to capture moving objects as blurry streaks, such as water or lights. This effect creates an artistic blur that adds dynamics and character to the photograph. The use of these filters can significantly affect the quality and aesthetics of photographs, giving photographers a tool to express their creativity in new ways.

MCUV filters

The MCVU filter is a practical solution for both enthusiasts and experts in the field. By reducing ultraviolet rays, it expands the viewing distance of the camera, especially in mountainous landscapes or at high altitudes. At the same time, it acts as an additional lens hood, protecting the lens from possible mechanical damage. This kit is an ideal tool for photography and filming enthusiasts, allowing them to explore new possibilities and get impressive results with the excellent quality of Sunnyslife filters.

Set contents

- MCUV filter x 1
- CPL filter x 1
- ND4 filter x 1
- ND8 filter x 1
- ND16 filter x 1
- ND32 filter x 1
