

Set of 3 filters PolarPro ND/PL for DJI Mavic 3 Pro

Set of 3 filters PolarPro ND/PL for DJI Mavic 3 Pro

Ref: 817465029220

Set of 3 PolarPro ND/PL filters for DJI Mavic 3 Pro.

Create even more beautiful aerial shots. The Shutter set includes 3 ND filters (ND8, ND16 and ND32) designed for the DJI Mavic 3 Pro drone. With them, you can reduce the shutter speed and record fantastic quality videos in almost any lighting conditions. High-quality CinemaSeries glass and lightweight yet durable aluminum were used to make the accessories. All filters come in a box with a magnetic closure.

Create breathtaking shots

The included ND filters will allow you to reduce the shutter speed, making them perfect even in extremely challenging lighting conditions. As a result, you can enjoy beautiful, crisp images and vivid colors! ND8 filter (3 stops) is ideal for recording during blue or golden hour. ND16 filter (4 degrees) will work well in the morning and evening. ND32 filter (5 degrees) will be the right choice when working in the middle of the day, when it is brightest outside.

Top quality workmanship

The filter frames were created from durable, yet extremely lightweight aircraft aluminum. As a result, they do not weigh down the drone and do not negatively affect its flight time. What's more, high-quality CinemaSeries glass has been used for the accessories, which guarantees fantastic clarity and stands out for its low refractive index. All filters are placed in a practical box with a magnetic closure,

which makes them much easier to store and transport.

In the set
