

Curtain Motor SwitchBot Rod 3 (white)

Curtain Motor SwitchBot Rod 3 (white)

Ref: 850046603471

SwitchBot Curtain Rod 3 curtain rod system (white)

Want an easy way to turn your ordinary curtains into smart curtains? The Curtain Rod 3 system will help you do that! Just attach it to the curtain rod and pair it with a dedicated app. Once you do that, you will gain the ability to remotely control your curtains using your smartphone. You also have the Touch & Go function at your disposal. You can also control the product with a SwitchBot Remote (not included) or a voice assistant (when paired with a separately available control panel).

Smart curtains in just a few moments

Experience how little it takes to make your curtains smart. Simply add the Curtain Rod 3 system to the app, then mount the device and calibrate it according to the instructions displayed on your smartphone screen. It won't take you too long! If you have double curtains, you will need 2 switches. What's more, the Curtain Rod 3 system is distinguished by its lifting capacity of up to 15 kg.

Convenient control

Are you already lying in a comfortable bed, but forgot to close the window curtains? That's not a problem - if you're using SwitchBot, all you have to do is reach for your phone! Now you can conveniently control your curtains using the app. What's more, a small SwitchBot Remote is available for sale separately, which also allows you to control the system remotely. What's more, the system can operate surprisingly quietly - in silent mode it emits only 25 dB, which will be ideal for people who have trouble sleeping or are sensitive to noise.

Additional capabilities with the app

The SwitchBot app will not only allow you to cover and uncover windows, but also provide convenient access to a number of interesting features. With its help, for example, you can set a work schedule (up to 5, and if you have a hub in addition, any number). It is also possible to set the system to pull the curtains with a delay. A Light Sensor (Beta) function is also available. It allows the device to adjust its operation depending on the prevailing lighting conditions.

Touch & Go function

Even once you've installed your SwitchBot system, you'll probably still reflexively try to close your windows manually. With such situations in mind, the Touch & Go function was created - when the device detects that you are pulling the curtain, it will automatically start pulling it for you. Let it do the work for you and enjoy more comfort in your home!

With SwitchBot Hub Mini control panel you can do even more

Do you care about additional capabilities? Combine the Curtain Rod 3 system with the SwitchBot Hub Mini (sold separately) and get convenient access to additional functions! Now you can, for example, control the device with voice commands - it is compatible with Amazon Alexa and Google Assistant, and supports Siri Shortcuts. The product also works with IFTTT and SmartThings. It's also possible to automate its operation and connect it with other equipment from the SwitchBot ecosystem.

Long runtime

Don't worry that the Curtain Rod 3 system will refuse to serve you too quickly. The device is equipped with a long-lasting battery, so a fully charged one can serve you for up to 8 months. It is also possible to power it with a dedicated solar panel (sold separately).
