TWS QCY T21 earphones (silver)

The QCY T21 earphones were created for anyone who appreciates not only quality, but also style. The glossy design makes them perfect as an elegant accessory. The 10-millimeter drivers with a bass horn are responsible for the fantastic sound, and the built-in ENC noise-canceling microphones will allow you to make casual phone calls. This model also offers touch control for complete comfort.

Clear sound

The T21 wireless earphones are equipped with a 10-millimeter compound dynamic diaphragm and offer excellent sound quality. The titanium coating on the diaphragm allows for better treble reproduction, which enhances the detail and clarity of the sound. On the other hand, the bass tube, which is part of this design, was created to improve bass reproduction. In practice, this means that the earphones provide strong and deep bass. The combination of these elements provides a full range of sound with good detail and clarity. Get carried away with your favorite tunes!

Elegant design

The QCY T21s are also great to add to your everyday styling. Their elegant design will appeal to fans of bling and extravagant closet pieces. What's more, the charging case is a real visual treasure - with the T21 model feasts not only your hearing, but also your eyesight!

Touch operation

The earphones feature touch control, so you can freely manage your music playback and calls with just a few touches. What's more, at your disposal is the ability to operate the camera - just one touch on the earphones to take a photo. Now you can easily take a group photo without using the self-timer!

Listen around the clock

The earphones guarantee a long working time! Fully charged batteries allow for 6 hours of listening. With the charging case you gain another 18 hours, which gives you a full 24 hours with your favorite music or podcasts. During this time you are able to listen to up to 360 songs!

Reliable Bluetooth connection

The QCY T21s use a Bluetooth version 5.3 connection, so you can enjoy stable, interference-free transmission over distances of up to 10 meters! What's more, with a latency of 0.068 seconds, you'll delight in the perfect synchronization of sound and video. T21 is a real treat for gamers and fans of watching movies on a smartphone.

Free phone calls

Equipped with a quadruple ENC noise-canceling microphone, the T21s guarantee full freedom during phone calls. The sound of your voice to the caller will be crystal clear, while ambient sounds are effectively eliminated, so you can talk even in noisy environments. In addition, the system effectively eliminates wind noise (up to 25 km/h), so nothing will escape your caller, even when you're calling them while rushing to the bus stop on a windy day!

Compatible and easy to use

The earphones work with iOs and Android, providing broad compatibility with most popular devices. A specially designed animation will allow you to easily connect the T21 to the hardware of your choice. In the dedicated QCY app, you can personalize the operation of the earphones and adjust EQ values and more! Check out all the possibilities!
