

Set of 4 filters PolarPro Shutter for DJI Air 3

Set of 4 filters PolarPro Shutter for DJI Air 3

Ref: 817465029527

Set of 4 PolarPro Shutter filters for DJI Air 3

Now you can control the light and shutter, achieving effects worthy of a professional. The set includes 4 neutral filters (ND8, ND16, ND32 and ND64) that allow you to control the shutter speed at a film level, regardless of the lighting conditions. They are perfectly matched to the DJI Air 3, and their installation will not be a problem for you. High-quality CinemaSeries glass and lightweight yet durable aluminum were used. All filters are housed in a practical case for easy storage.

Discover the power of ND filters

ND filters are an indispensable tool for anyone who wants to enhance the quality of their footage. By controlling the amount of incoming light, ND filters allow you to achieve longer exposure times and a more controlled motion blur effect. With them, you can capture beautiful sunsets, create slim trails of light in the night sky or bring out every detail in bright sunny conditions.

Superior build quality

PolarPro filters have been designed with the DJI Air 3 in mind. Each filter is made of lightweight aircraft-grade aluminum, which not only makes it easy to install, but also guarantees full compatibility with your drone's gimbal - they won't weigh it down or negatively affect its flight time. Meanwhile, German CinemaSeries tempered glass is used for the lens, which is distinguished by its low refractive index. This allows you to focus on creating amazing shots without worrying about image quality.

Included
ND8 filter
ND16 filter
ND32 filter
ND64 filter
storage case
Manufacturer
PolarPro
Model
AR3-SHUTTER
Compatibility
DJI Air 3
