

Set of 4 filters PolarPro ND/PL for DJI Air 3

Set of 4 filters PolarPro ND/PL for DJI Air 3

Ref: 817465029510

Set of 4 PolarPro ND/PL filters for DJI Air 3

Create even more beautiful bird's eye shots. The set includes 4 ND filters (ND8, ND16, ND32 and ND64) designed for the DJI Air 3 drone, allowing you to reduce shutter speed and capture fantastic quality videos in almost any lighting conditions. High-quality CinemaSeries glass and lightweight yet durable aluminum were used to make the accessories. All filters come in a box with a magnetic closure.

Create breathtaking shots

ND filters will allow you to precisely control the amount of light coming in. The ND8 filter is a great choice for creating shots in the blue or golden hours, while the ND16 filter will be perfect for shooting in the morning and evening. The ND32 and ND64 filters will be suitable when working in the middle of the day, when the light is most intense. With these filters, you can be sure that your shots will gain professional quality, regardless of the lighting conditions.

Superior build quality

PolarPro filters were designed with the DJI Air 3 in mind. Each filter is made of lightweight aircraft aluminum, which not only makes it easy to install, but also guarantees full compatibility with your drone's gimbal - they won't weigh it down or negatively affect its flight time. Meanwhile, German CinemaSeries tempered glass is used for the lens, which is distinguished by its low refractive index. This allows you to focus on creating amazing shots without worrying about image quality.

Included
ND8/PL filter
ND16/PL filter
ND32/PL filter
ND64/PL filter
storage case
Manufacturer
PolarPro
Model
AR3-VIVID
