Ref: 6930460006738

Petoneer Nutri Vision Mini Intelligent Feed Feeder

The Petoneer Nutri Vision Mini Intelligent Food Feeder is a practical device that will ensure your pet always has access to delicious, fresh food. The built-in camera will provide you with a real-time 720p preview, which means you can see your pet at any time. When you pair the device with an app, you will also gain the ability to plan feeding schedules, among other things. The dispenser has a capacity of 2.6 liters, so you don't have to refill it too often.

Don't lose touch with your pet and always keep an eye on it

Nutri Vision Mini is equipped with a camera that provides HD video and a 130° field of view. This will allow you to see how much food your pet eats and further customize your pet's feeding plan. The device also supports 2-way audio. So if you are away from home, miss your pet or are worried that it might feel lonely, you can always not only see it, but also say something to it! The Nutri Vision Mini also lets you take photos and record short videos - you can easily capture every precious moment.

For the proper diet of your pet

Care for your pet's healthy eating habits. Pets can often be greedy and tend to overeat, which inevitably leads to overweight and health problems. With Nutri Vision Mini you can avoid similar problems! With the dedicated app you can plan a feeding schedule optimally adapted to your pet's needs and you can be sure that your pet will not go hungry or eat too much. The app also allows you to control the

device remotely - with just one click you can give your pet a portion of food!

No more forgetting to refill the feeder

The capacity of the Nutri Vision Mini is 2.6 liters. This is enough to provide your cat or small dog with food for about 10-15 days. So you can go on a short trip, stay longer at work or go to an all-night party with peace of mind - your pet is not in danger of being hungry. You also do not have to worry about forgetting to refill the feeder. The device is equipped with intelligent sensors that detect the remaining amount of food - if there is not enough food left, a red LED light will come on. You will also receive a notification in the app.

Will not block

Fear that pieces of food may block the device? Don't be! It has been designed to minimize the risk of similar problems. The powerful motor and impeller design effectively prevent them. And even if extremely troublesome pieces of food temporarily block the feeder, you will immediately receive an appropriate notification in the app. So you can react to the problem in no time - your pet will always get its meal on time!

Emergency power capability - be prepared for any situation

The feeder is powered by USB. There is also the possibility to put 4 LR14 batteries in it, which will serve as an emergency power source in case of a power outage. You no longer have to worry that due to an unforeseen problem your pet will not get a meal. Nutri Vision Mini will not let you down in any situation! Please note: batteries are not included - please buy them separately.

Easy to clean and safe for pets' health

You don't have to worry about cleaning problems with the unit either. Its modular design makes it easy to disassemble, clean and put back together. All parts fit together perfectly and are securely in place - they won't come loose even after long periods of use. What's more, the food bowl and container are made of high-quality materials that are not only durable and easy to clean, but also food-grade and safe for pets.

Always fresh food

The food stored in the feeder stays fresh for a long time. The high-quality 360° silicone seal effectively blocks the flow of air, protecting the food from oxidation. What is more, the device is equipped with a special desiccant which eliminates moisture and thus prevents food from spoiling. So you do not have to worry about anything - your pet will always get a portion of fresh, healthy food.

Additional benefits - even more comfort

This is not the end of the advantages of Nutri Vision Mini! When designing the device, even the smallest details were taken care of to ensure you and your pet comfort. The lid of the feeder can be locked. This way your pet won't accidentally open it and steal the extra food. There are also non-slip pads on the bottom of the Nutri Vision Mini. This provides the necessary stability to the device and will ensure that it does not shift. So your pet can eat their food comfortably!
