

Filter Set PolarPro for Mavic Air 2S Directors Set

Filter Set PolarPro for Mavic Air 2S Directors Set

Ref: 817465026793

Filter Set for DJI Air 2S PolarPro Directors Set

The Directors Set is the perfect choice for pilots who want to gain total control over every shot. Including 2 VND filters and 3 ND/PL filters, you'll get cinematic shutter speeds with or without polarization. You can produce stunning images in almost any lighting condition. CinemaSeries™ glass guarantees superior optical quality. The filters were designed specifically for the DJI Air 2S. Made of lightweight aluminum, the frame won't weigh down your drone or affect flight time. You will also find a practical, magnetic case in the set.

ND/PL filters - a successful combination of well-known and well-loved effects

Create spectacular shots even in difficult lighting conditions. ND/PL filters combine 2 popular effects - ND and polarization. They reduce glare for clear images and vivid colors even in bright, glare-prone environments. ND8/PL offers 3 stops of light control and polarization ideal for filming during the golden or blue hour. The ND16/PL gives 4 stops of light control and will work well for shooting in the afternoon. The ND32/PL, on the other hand, gives 5 stops of light control and is perfect for shooting in very bright conditions.

VND filters - enjoy excellent image quality in almost any situation

VND filters are an indispensable tool for demanding filmmakers and photographers. Thanks to them you will gain the capabilities necessary to create great shots even in very bright environments. Laser engraved indicators on the frames allow you to precisely adjust the effects to your expectations. The VND 2-5 gives you 2-5 levels of light control and is perfect for most lighting conditions. The VND

6-9, on the other hand, offers 6-9 levels of light control and is ideal for very bright environments.

Created specifically for your drone

The filter frames are made of feather-light aluminum, so they don't put undue strain on your DJI Air 2S and don't negatively impact flight time. They have also been optimized for gimbal operation. The CinemaSeries™ glass, on the other hand, is distinguished by its high strength, neutral color and low refractive index. The use of high-end materials ensures that you can enjoy excellent image quality in almost any situation.

Magnetic case - convenient and safe transport of your filters

The included magnetic case allows you to safely store and transport your filters. You no longer have to worry about accidental damage. Simply store them in the case and take them with you when traveling or on an outdoor session. You can always have PolarPro filters on hand and use them to create stunning aerial shots regardless of the lighting conditions!
