Darkflash TR360 PC Water Cooling AiO RGB 3x 120x120 (black)

Ref: 6926170083688

Darkflash TR360 PC Water Cooling AiO RGB 3x 120x120 (black)

360 mm Darkflask TR360 water cooler (black)
Adequate cooling of your computer is what you get with this device. In addition to being functional and reliable, it is also stylish through its colourful backlighting and modern design.3 powerful 120mm fans and a heat sink with wavy fins are responsible for the right temperature. It can be synchronised with the motherboard via the ARGB cable to reflect its colours. The device provides optimal heat distribution and quiet operation at a maximum of 35 DB at a time. The device is compatible with AMD and Intel processors and the installation itself is very simple.

Effective cooling
Thanks to the corrugated structure of the fins, the efficiency of the device is increased. Powerful fans deliver an airflow of 70 CFM, which ensures that the cooling liquid temperature is effectively lowered. Cooling can be maintained through optimum heat dissipation and exchange, thanks to a clever design and the use of materials perfectly suited to dissipating high temperatures.

Quiet use
You don't have to worry about noise, as the fans are built to effectively minimise it. Thanks to the air interception technology used in the fan blade design, the air resistance is reduced, so that the maximum noise generated does not exceed 35 db.

Easy Mount

Installation of this unit is very simple. It can be synchronized with your motherboard and is compatible with specific AMD and Intel CPU models including LGA 775 / 1155 / 1156 / 1366 / 2011 and AM4/FM2 / FM1 / AM3+ / AM3 / AM2+ / AM2.

Functionality and style

The built-in cooling pipe is covered with a braided and robust material, which prevents it from abrasion or accidental damage. This also contributes to its flexibility, making it much easier to place inside the case.

Highlight

The device has a modern design, which is highlighted by 3 fans with 3 rows of RGB spirals placed and a pump located on the processor.ARGB cable allows you to connect the cooling under the controller, which allows you to integrate the cooling into a functioning system of glowing components.
