

Elesense E1129 Monitor LED lamp with remote control (black)

Ref: 6975188890009

Elesense E1129 Monitor LED lamp with remote control (black)

Elesense E1129 Monitor lamp with remote control (black)

Ensure optimal illumination while working or playing games. Elesense E1129 monitor lamp generates eye-safe light that does not reflect off the screen, does not tire your eyes or glaring. You can also adjust its brightness and colour temperature (2700-6500 K). The kit also includes a circular remote control that allows you to control the light remotely. The product is compatible with monitors 0.7-4.5 cm thick.

Optimum illumination

The Elesense monitor lamp will come in handy whether you are working or relaxing. Thanks to its well-thought-out design, the light it generates falls on your desk - it will illuminate your keyboard or notebook, while at the same time not reflecting off the screen or striking you in the eyes. The device is also distinguished by its high colour rendering index ($Ra > 95$).

Adapt the light to your needs

Planning to do some work? Or do you want to relax after a long, challenging day? The E1129 lamp will provide you with optimal lighting for every occasion! The product allows you to adjust the brightness of the light in 12 steps and adjust its colour temperature in 12 steps. It also offers 3 lighting modes - work mode, relaxation mode and reading mode. Adapt the lighting to your needs and enjoy greater comfort!

Improved design

The lamp is equipped with high-quality LEDs - 45 of them generate warm light and 45 generate cold light. This is what allows you to adapt the lighting parameters to your needs! The unit is also very easy to install and has rubber pads to prevent damage to the monitor display. The product also has a built-in light sensor.

Functional remote control included

Enjoy even more convenient operation of the lamp. A circular remote control is included that allows you to control it from a distance. With it you can, for example, adjust the brightness and colour temperature of the light. Now everything you need is always at your fingertips! But that's not all - one remote control allows you to control more lamps. So you don't have to adjust each unit individually!

In the box

Monitor light

2.4 G remote control
