Electric clipper and trimmer Glaker GL-K11S+ I11

Electric clippers and trimmer Glaker GL-K11S I11.

The Glaker GL-K11S I11 set includes an electric clipper and trimmer to help you take care of your hairstyle and beard. The devices are equipped with powerful batteries that allow for 5 and 3 hours of operation, respectively. The noise level during operation is up to 60dB. You can use the razors wirelessly for maximum convenience of use and precision. Thanks to the universal USB-A cable, you can recharge the devices once the battery has run out.

Freedom of movement and precision

Both the clippers and the trimmer work wirelessly so you can move freely and fine-tune the details of your hairstyle or beard without worrying about the cord restricting your movements. The razor's battery allows up to 300 minutes of use and takes 3 hours to charge, while the trimmer can run for 180 minutes - it takes 2 hours to charge. Both devices are perfect for work, travel, vacation or home use.

Multi-piece set

The kit includes not only the razor and trimmer, but also a range of accessories for efficient, precise work. A total of 18 attachments will allow you to cut according to your vision. For the razor, the attachments allow lengths from 1.5-5.1mm, and for the trimmer, 2-4mm, giving a wide range of lengths. A bottle of oil is included to keep the devices running smoothly. In addition, in the handy carrying case in which the accessories are arranged, you'll also find instruction manuals, a brush for clearing hair, a USB cable and a cape to prevent hair

from spilling over the body and annoying stinging when you're done.

Sturdy construction

Both razors feature sturdy metal construction, which ensures that the devices will last a long time, and also makes them easy to clean. The sleek, minimalist and austere finish make the equipment look professional. The blades are made of stainless steel, which resists corrosion and will allow you to work with damp hair for a long time.

LED display

The razor's design includes an LED display that, among other things, informs you of the battery status so you can charge the battery before it dies and use the razor the next time you want.
