GameSir G7 Wired Controller (Black)

The GameSir G7 controller is the perfect choice for the most demanding gamers, allowing for customization and ensuring high performance. It stands out with impressive speed and minimal latency, providing unforgettable experiences and enhancing gameplay quality when playing on an Xbox console.

Speed and Precision

With a refresh rate of 256Hz and a low latency of less than 0.004s, the G7 controller allows for lightning-fast reactions to every move. Precisely tuned analog triggers with Hall effect provide exceptional precision and respond to the subtlest finger movements. FPS gamers and action fans can easily switch to Hair Trigger mode. With GameSir, you'll gain an advantage on the battlefield and defeat any opponent!

Attention to Detail

The controller's touch buttons have been finely tuned and feature a 5-layer structure. Microswitches provide quick activation with a minimal activation distance of only 0.6mm, while the built-in set, including a soft rubber pad and support, enhances usability further.

Realistic Experience

Enjoy full immersion during gameplay. The variety of engine vibrations in the grips provides continuous feedback, and the 2 motors inside the triggers transmit feedback to your fingertips. As a result, you'll enjoy a realistic experience during impacts, shots, and driving on uneven surfaces.

Create Your Dream Controller

Now you can express yourself by painting the controller's interchangeable front plates and customizing its appearance to your liking! Additionally, the GameSir Nexus software provides even more customization and fun with the G7 controller. You can create controller profiles, map buttons, adjust the D-pad diagonal, configure joystick and trigger zones, and even configure vibrations. There's also the option to freely switch between default mode and exclusive Raw mode. You can save up to 3 profiles and use them as needed depending on the game.

Comfort Solutions

The GameSir G7 controller features a 3.5mm audio jack, allowing you to connect a headset and conveniently adjust the volume level. There's also the option to mute the microphone with a dedicated button with a red indicator. Furthermore, the texture on the bumpers and triggers has been refined to make finger movements easier during intense actions, and the rubber grips at the back provide comfort during extended gaming sessions.

Mapping Capability

The G7 model is designed for professional mobile gaming, so it comes with 2 additional rear buttons that allow you to map in-game actions and load your favorite button configurations, both with and without software. The mappings are immediately programmable and synchronized in real-time.

Versatility

You no longer have to limit yourself - use the GameSir controller freely while playing on Xbox Series X/S, Xbox One, or Windows 10/11. The device is also compatible with Windows 10 and 11. Regardless of the system you use, you can enjoy smooth gameplay and unique gaming experiences with minimal delays.
