

Set transmitter + receiver FlySky i4X + A6

Set transmitter + receiver FlySky i4X + A6

Ref: 5907489600965

FlySky i4X + A6

The FS-i4X is a 4-channel control unit (expandable to 10 channels) from the renowned FlySky company. The device operates at frequencies from 2.405 to 2.475GHz. The apparatus has anti-interference capabilities and uses the V-MIX control system, compatible with many models. The unit is designed for fixed-wing aircraft, gliders and helicopters. The FS-i4X uses low-power electronic components and a sensitive receiver. RF modulation uses an intermittent signal, reducing power consumption even further. The AFHDS2A system has an auto-identification function that can switch between one-way and two-way communication modes automatically according to customer needs.

Transmitter

□ Dimensions

□ 174 mm x 89 mm x 190 mm

□ Weight

□ 323 g

□ Antenna length

□ 26 mm

□ Number of channels

□ 4 (4-10)

- Power supply
- 4 AA batteries (not supplied)
- Operating frequency
- 2.4 - 2.48 GHz
- Modulation
- GFSK
- Application
- Aircraft, gliders, helicopters, drones
- Screen
- None, LED lights
- Ports
- PS2, PPM
- System
- AFHDS 2A / AFHDS
- Receiver
- Number of channels
- 6
- Range
- Up to 1 km
- Modulation
- GFSK
- Dimensions
- 45 mm x 23 mm x 9 mm
- Weight
- 13 g
- Telemetry
- It is
- Antenna length
- 26 mm
