

Wireless Juice Blender Deerma NU30

Wireless Juice Blender Deerma NU30

Ref: 6955578037535

Deerma NU30 cordless blender

Now you can enjoy a delicious juice or smoothie wherever you are. The 300ml Deerma NU30 cordless portable blender is lightweight and compact enough to easily take with you almost anywhere. The rechargeable battery ensures a long run time, while the powerful motor and 304 stainless steel blades ensure precise chopping of ingredients and blending.

Ideal consistency for smoothies and juices

Say goodbye to delaminating smoothies and large, poorly blended fruit and vegetable particles. The blender is equipped with stainless steel S-type blades and a powerful motor that runs at up to 16,000rpm. The large space inside the device prevents ingredients from getting blocked. All this means that the NU30 perfectly shreds vegetables, fruits and even ice cubes, giving you delicious juices, smoothies and purees with the perfect consistency.

You can always have it with you

Blender not only looks great, but also provides unparalleled comfort. The groundbreaking 2-layer design gives it a unique character and makes it easy to hold in your hands. The device weighs only 440g and is not much bigger than a normal bottle - you can easily fit it in your purse or backpack and take it for a walk, on a trip or to the gym. Now you can drink refreshing juices and smoothies wherever you like!

Prepare a delicious smoothie in minutes

To turn on the device, simply press the ON/OFF button twice. This prevents you from accidentally starting the blender - for example, when carrying it in your handbag. The NU30 takes just 45 seconds to prepare a delicious, healthy drink for you. That's all it takes to enjoy a refreshing orange juice, a smooth strawberry smoothie or a nutritious vegetable puree!

Safe for health and easy to maintain

The product is made of PC plastic that can be safely used for food storage. It is also extremely easy to maintain. The surface of most parts of the device is flat and smooth, which makes it much easier to clean. The blades of the blender can be washed under running water, so you can keep them in excellent condition even longer and take care of the hygiene of use.

Wireless design - long runtime

Unpractical cables will no longer limit you. The cordless blender can serve you almost anywhere. The NU30 is equipped with a 1500mAh battery, which when fully charged allows you to prepare 6-8 glasses of drink. The built-in USB charging port allows you to conveniently charge the device with a wall or car charger, or even a powerbank. Simply plug a discharged blender into a power source - after about 3 hours it will be ready to use again!

In the interest of safety

The Deerma NU30 blender ensures complete safety of use. If you remove its lid, the built-in sensor will immediately detect this and the motor will shut down to protect you from accidental injury. The device is also protected against overcharging and battery over-discharging. What's more, its leak-proof design prevents possible leaks, so you can carry it in your backpack or purse without worry.
